"I feel I would like to congratulate you on your latest blind flying instrument, the Gyrogon. I recently had one fitted to my Bristol Fighter aeroplane which is specially equipped for aerial cinematograph work.

In the past weeks I have had to make frequent journeys up to 15,000 feet in order to shoot cloud effects, and always this has necessitated a great deal of cloud flying often in conditions of turbulence and when ice has formed on the aircraft.

Never once has your instrument failed me for a moment; but perhaps what is more important, as your past instruments have had that essential attribute, I cannot conceive any other device that could evoke such natural and effortless response from the pilot."
